Hiring Policies & B2B SOPs

Corporate guidelines, compensation templates, and credibility protocols designed for RIVIX leadership.

Contents

- SOP 101 — Straight Commission Compensation Model
- SOP 102 — Weighted Candidate Scoring Model
- SOP 103 — Brand Credibility Tactics for Young Founders
- SOP 104 — Portal as Sales Weapon — Field Playbook

Internal document — not for external distribution. Removed from the admin portal UI and delivered as a standalone reference document, 2026-09-25.

Straight Commission Compensation Model

100% straight commission only. RIVIX never pays reps cash — no salary, draw, stipend, advance, allowance, or reimbursement. Reps earn when customers pay RIVIX.

1. Objective & Scope

- To establish a pure straight commission model that eliminates fixed payroll risk for RIVIX while offering uncapped earnings potential for reps who bring active procurement contacts and can close contracts independently.
- **HARD RULE:** RIVIX pays reps zero cash. Period. No exceptions by tier, tenure, or relocation. The only money a rep receives from RIVIX is commission on closed and collected customer revenue (Section 2).
- Applies to all Independent Sales Representatives and Contract Business Development Agents representing RIVIX compliance garments in Canada.

2. Commission Structure

- **Commission Rate:** 12–15% of gross margin on all closed and collected revenue. This is intentionally higher than typical garment industry rates (5–8%) because there is no base salary.
- **Residual Commission:** 8% on all repeat/renewal orders from accounts originated by the rep. Residuals continue for 24 months from initial contract signing while actively representing RIVIX.
- **Accelerator Bonus:** Once a rep exceeds \$250,000 in cumulative closed revenue in a fiscal year, commission rate increases to 18% on all subsequent deals for the remainder of that year.

3. Onboarding Support (In-Kind Only — Zero Cash)

- RIVIX provides in-kind tools only: product samples (up to 3 garments per size for qualified reps), branded presentation materials, and portal demo access.
- RIVIX does not fund travel, vehicles, fuel, lodging, meals, phone, or living expenses. Reps cover all costs out of pocket until commission checks arrive.
- Never promise monthly pay, draws, advances, allowances, or reimbursements. If a candidate needs guaranteed income, they are not a fit for this role.

4. Territory & Account Ownership

- Territory is assigned by postal code region. Alberta is divided into 4 zones: Edmonton/Nisku (Zone A), Red Deer/Lacombe (Zone B), Calgary/Cochrane (Zone C), Fort McMurray/Athabasca (Zone D).
- Account ownership lasts 12 months from first documented contact. If no revenue is generated from an account within 12 months, it reverts to open pool.
- Reps may not solicit accounts outside their assigned territory without written approval.

Weighted Candidate Scoring Model

The five-dimension weighted scoring system used to rank and prioritize sales candidates for straight-commission garment replication roles.

1. Scoring Dimensions & Weights

- **EXISTING ROLODEX (30%):** Active procurement contacts, safety superintendent relationships, and current accounts in target industries (oil & gas, construction, utilities, manufacturing). This is the single most important dimension because straight commission means no ramp time — they must close from existing relationships.
- **ALBERTA / WESTERN CANADA PROXIMITY (20%):** Physical presence in Alberta or Western Canada. Wear trials, site visits, and safety superintendent meetings are all in-person activities. Remote candidates from Ontario receive low scores here unless they commit to relocation.
- **INDUSTRY KNOWLEDGE — FR / CSA / NFPA (20%):** Technical fluency in flame-resistant fabrics, CSA Z96-15 high-vis standards, NFPA 2112 certification, arc flash ratings (ATPV/cal/cm²), and garment construction quality. Reps sell compliance assets, not t-shirts.
- **COMPETITIVE INTEL (15%):** Direct experience working at or selling against UniFirst, Cintas, Aramark, or Mark's Commercial. Understanding how competitors lock clients into rental contracts is RIVIX's core disruption advantage.
- **SALES METHODOLOGY (15%):** Proven B2B hunting ability, contract negotiation skills, deal closing track record. Preference for "hunters" over "farmers".

2. Tier Classification

- **Tier 1 (Weighted Score 7.0+):** Priority candidates. Eligible for sample kits and immediate territory assignment. Schedule screening call within 48 hours. Compensation is identical to all tiers: commission only, zero cash from RIVIX.
- **Tier 2 (Weighted Score 5.5–6.9):** Solid candidates with gaps. May lack Alberta proximity or industry-specific knowledge. Require onboarding investment. Evaluate on case-by-case basis.
- **Tier 3 (Weighted Score below 5.5):** Low priority. Significant gaps in multiple dimensions. Not recommended for straight commission model — too risky for both parties.

3. Critical Disqualifiers

- Mark's Retail is NOT Mark's Commercial B2B. Retail store experience does not constitute competitive intel. Do not flag retail employees as "Competitor" hires.
- Candidates with zero Alberta proximity AND zero existing rolodex are not viable for straight commission. They have no warm leads and no ability to do site visits.

- Car sales, real estate, and B2C door-to-door experience scores LOW on Sales Methodology. B2B contract selling to procurement departments is fundamentally different.

Brand Credibility Tactics for Young Founders

Guidelines and communication SOPs designed to ensure RIVIX's small, young executive team maintains absolute authority and credibility when conducting interviews with senior industry veterans.

1. Setting the Frame of Authority

- Do not apologize for RIVIX's startup size. Position RIVIX as an agile, compliance-first tech-enabled safety partner that is disrupting slow, bureaucratic legacy uniform providers (UniFirst, Aramark, Mark's).
- Focus on our rapid technical iteration: "We convert physical uniforms to digital tech packs and begin factory replication in 72 hours, whereas our competitors take 6 weeks."

2. Terminology & Communication Protocol

- Always refer to our supply chain as "our advanced production factory, which maintains international ISO 9001 and WRAP-compliance certificates."
- Avoid talking about "shirts or pants". Speak in terms of "Active Safety Garments", "Compliance Batches", "Weave Densities (GSM)", and "Vendor-Managed Inventory (VMI) systems".

3. The Live Demo Close

- During candidate interviews, open the RIVIX Portal on screen and walk through a live replication ticket. Show the AI garment analysis generating a full tech pack from a photo in real-time. This demonstrates technical depth that no competitor can match.
- Say: "Our reps walk into a safety superintendent's office, photograph their current worn-out overalls, and show them a factory-ready tech pack being generated on an iPad in 60 seconds. That is the RIVIX demo."

Portal as Sales Weapon — Field Playbook

How RIVIX sales reps leverage the Compliance Portal as a live sales tool during prospect meetings, wear trials, and contract negotiations.

1. The 60-Second Replication Demo

- This is RIVIX's killer sales move. During a prospect meeting, the rep photographs the client's current uniform (usually worn-out UniFirst/Cintas rentals), uploads it to the RIVIX Portal, and triggers the AI Garment Analysis. Within 60 seconds, the prospect sees a full tech pack generated: technical flat sketch, POM measurements, construction details, stitch specifications, and BOM.
- Script: "We don't need your spec sheet. We don't need your vendor's cooperation. Give me 60 seconds with your current uniform and I'll show you exactly what you're wearing — and how we can build it better, for less."
- This demo should be run on an iPad or laptop during every first meeting. It is the single most effective differentiation tool against legacy competitors who require 4–6 week quoting cycles.

2. Client Portal Access as a Closing Tool

- During the negotiation phase, offer the prospect a free client portal login. They can track their sample replication in real-time — from submission to AI spec mapping to factory production to shipping.
- UniFirst and Cintas do not offer this transparency. When a prospect can see their garment being replicated live on a dashboard, it builds trust that eliminates the "unknown supplier" objection.
- The Compliance Certificates page auto-generates CSA/NFPA compliance PDFs. Email these to the prospect's safety manager during the meeting. Competitors take weeks to produce compliance documentation.

3. Wear Trial Protocol

- Step 1: Rep visits the site with 3 sample garments (M, L, XL) and a branded RIVIX presentation folder.
- Step 2: Photograph the client's current garments on-site. Upload to RIVIX Portal and run AI analysis in front of the safety superintendent.
- Step 3: Leave sample garments for a 2-week wear trial. Set a calendar reminder for follow-up.
- Step 4: At follow-up, collect feedback and open the Client Portal to show the full tech pack. Ask: "Do you want us to produce 500 of these with your logo?"
- Step 5: If yes, create the replication ticket in the portal and walk the client through real-time tracking.

4. Competitive Displacement Script (UniFirst/Cintas)

- When a prospect says "We already have a contract with UniFirst/Cintas", use this framework: "I understand. Most companies do. But let me ask — do you know what you're actually paying per garment per week? When you factor in lost garment charges, size change fees, damage surcharges, and mandatory minimums, you're typically paying 28–40% more than outright ownership. We can replicate your exact garment, at higher quality with FR-rated Nomex threads and YKK zippers, and deliver ownership in 3 weeks. Your workers get brand-new garments, and you stop renting."
- Key data points: UniFirst average rental cost per garment is \$3.50–\$5.00/week (\$182–\$260/year). RIVIX ownership cost for equivalent garment: \$85–\$140 one-time. Break-even in 6–8 months. 3-year savings: \$300–\$500 per worker.

5. Target Industry Priority List

- 1. OIL & GAS CONTRACTORS (Highest priority): Suncor, CNRL, Cenovus subcontractors. FR overalls, high-vis, arc flash protection. Highest margin, most compliance-driven. Decision maker: Site Safety Superintendent.
- 2. CONSTRUCTION / HEAVY CIVIL: High-vis vests, work pants, cold-weather parkas. Decision maker: Project Safety Coordinator.
- 3. UTILITIES / ELECTRICAL: Arc-rated FR garments mandated by electrical safety code. Decision maker: Safety Manager.
- 4. MUNICIPAL / TRANSIT: Uniforms with high-vis. Lower margin but high volume and repeat orders. Decision maker: Procurement Department.
- 5. FOOD PROCESSING / MANUFACTURING: General workwear, less compliance-driven but steady volume. Decision maker: Plant Manager.
